Dear SAMA recruiting team,

As a highly motivated and dedicated electrical engineer with knowledge of communication systems, I would like to apply for a position in King Abdullah City for Saudi Arabian Monetary Authority.

As a fresh graduate, I have studied in Electrical Engineering - communication systems in King Saud University (KSU).

During bachelor's degree while, I have been collaborated and achieved many accomplishments, including, but not limited to, collaborated with another engineer to design and implement a radar beampattern, which was the graduation project. Furthermore, I researched with 2 other engineers for a selected topic in fiber communication called wavelength division multiplexing (WDM) and presented in front of 30 students. over and above I collaborated with an engineer working on a computer network project about software-defined networking (SDN), which presented for 20 senior students.

In term of seeking to develop knowledge and skills, I have been in the University of California, Los Angeles (UCLA), as an intensive program student in summer 2014 for 12 weeks. Besides studying English abroad, I have been joined a non-credit academic programming course in College of Computer and Information Sciences (CCIS) in KSU for a semester in 2015.

It is a valuable opportunity to utilize my knowledge to improve technical and professional skills through joining Saudi Arabian Monetary Authority.

Sincerely yours,

Ahmad BIN Rabiah
